Software Engineer with a proven track record of designing scalable cloud-native systems, driving enterprise-wide cost optimizations, and elevating DevOps maturity throughout global teams. Experienced in leading end-to-end solutions from proof-of-concept to production, with deep expertise in AWS, infrastructure as code, automation pipelines, and full-stack development. Adept at mentoring teams, modernizing legacy systems, and building high-availability platforms with 99%+ uptime and 95%+ test coverage. Innovative leader with a filed patent in continuous scheduling for cloud resource orchestration

CORE COMPETENCIES

Cloud Architecture, Full Stack Development, System Design, API Development, Test Automation, Agile Methodologies, Code Review & Mentorship, Performance Optimization, Microservices Architecture, Security Best Practices, Monitoring & Observability, Technical Leadership, Scalability Engineering, Data Modeling, SDLC, Problem Solving & Troubleshooting

TECHNICAL SKILLS

Frontend Technologies: JavaScript, TypeScript, React.js, Angular, Bootstrap, HTML, CSS, Storybook, Redux, AJAX, Axios, Figma

Backend & Programming Languages: Python, Java, Scala, Kotlin, C, C++, Node.js, Spring, Spring Boot

Databases: Oracle SQL, DynamoDB, RDS

Cloud Platforms & Services: AWS (EC2, RDS, DynamoDB, S3, Lambda, SQS, Step Functions, ECS Fargate, CloudWatch, SNS, CloudTrail, Route 53, IAM, EventBridge, EventBus)

DevOps & Infrastructure: Terraform, Docker, Kubernetes, Jenkins, GitHub Pages, Git, GitHub, BitBucket, Cloud Custodian, Oracle VM, OAuth2

Testing & QA: Jest, Pytest, JUnit, Moto, Cypress, End, Postman, Insomnia, Swagger

Monitoring & Observability: NewRelic, OpenTelemetry, AWS CloudWatch

Tools & IDEs: VS Code, Eclipse, LucidChart, Jira, Confluence, GitHub Copilot

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER | Capital One

May 2021 - April 2025

- Spearheaded AWS cost optimization initiative by designing scalable workflows and onboarding over 70% of enterprise teams, resulting in \$200K+ in annual savings
- Championed adoption of internal cost-efficiency platforms by integrating Snowflake and AWS EventBridge, driving widespread utilization across business units
- Maintained high-availability cloud systems by configuring proactive alerts and observability via AWS CloudWatch, New Relic, and OpenTelemetry, sustaining platform uptime above 99%
- Guided DevOps transformation through SDLC improvements and iterative feedback cycles, enhancing velocity and reliability of cost optimization tools
- Orchestrated secure and compliant deployments via Jenkins CI/CD pipelines with integrated SonarQube, Mend (WhiteSource), and Pylint scans
- Mentored incoming engineers through structured onboarding sessions and hands-on training, accelerating ramp-up time and improving team documentation in Confluence and Jira
- Streamlined QA cycles by implementing automated testing suites with Pytest, Behave, Jest, and Cypress, reducing manual test overhead while driving 95%+ test coverage and 99% code reliability across core applications
- Resolved high-priority incidents via PagerDuty on-call support, leveraging AWS CloudTrail, Insomnia, and New Relic to troubleshoot system-level issues
- Delivered Flask-based proof of concept API containerized with Docker and deployed via AWS Fargate, showcasing scalability and minimal infrastructure overhead

FULL STACK CONSULTANT | Accenture | Revature Contract

December 2019 - February 2021

- Developed and executed backend test scenarios in local deployment environment, identifying critical bugs and ensuring production-ready code quality; created robust unit and integration tests with JUnit to validate complex business logic across monolithic codebase
- Accelerated team productivity by eliminating environment setup blockers within two weeks through targeted knowledge transfer sessions for new contractors
- Diagnosed and resolved QA-stage defects in legacy Java systems, improving production stability and reducing post-release errors
- Built Oracle-based backend logic via JDBC to meet evolving business requirements in financial and operational systems
- Emulated production behavior by deploying Spring Boot applications locally through Oracle WebLogic, accelerating defect triage and debugging

FULL STACK CONSULTANT | Capital One | Revature Contract

December 2018 - November 2019

- Automated infrastructure deployment using AWS CloudFormation, supporting rapid environment provisioning and 99% compliance via IaC best practices and proactive updating
- Established RESTful APIs to interact with DynamoDB, enabling scalable data access for high-volume use cases
- Managed configuration and patching of EC2 instances using Ansible, ensuring systems remained secure and compliant
- Authored comprehensive ScalaTests with Mockito to ensure unit test coverage and code reliability across systems and environments; compiled and packaged Scala applications using Gradle for efficient deployment and feature testing
- Processed large-scale data streams using Apache Spark and Apache Kafka, enhancing performance and throughput in serverless pipelines

FULL STACK CONSULTANT | Revature

December 2018 - February 2021

- Created Angular 7 web applications with Spring Boot, EC2, and RDS, streamlining deployment pipelines for real-world client use cases
- Implemented iterative feature rollouts for ride-sharing apps, including vehicle registration functionality, to expand service offerings and elevate client experience
- Delivered lightweight banking portal with JDBC and Java Servlets, deployed on AWS S3 static website to demonstrate core financial transactions

EDUCATION

Bachelor of Computer Science, SUNY Polytechnic Institute of Technology

PATENTS

Continuous Scheduling for Automated Suspension and Resumption of Cloud Resources

Application #20240179053 | Filed November 2022

- Invented a system for dynamically scheduling cloud resource states (running or suspended) using metadata-based uptime/downtime tags, enabling continuous automation of cloud infrastructure management and reducing operational overhead through efficient resource scaling
